WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on a duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

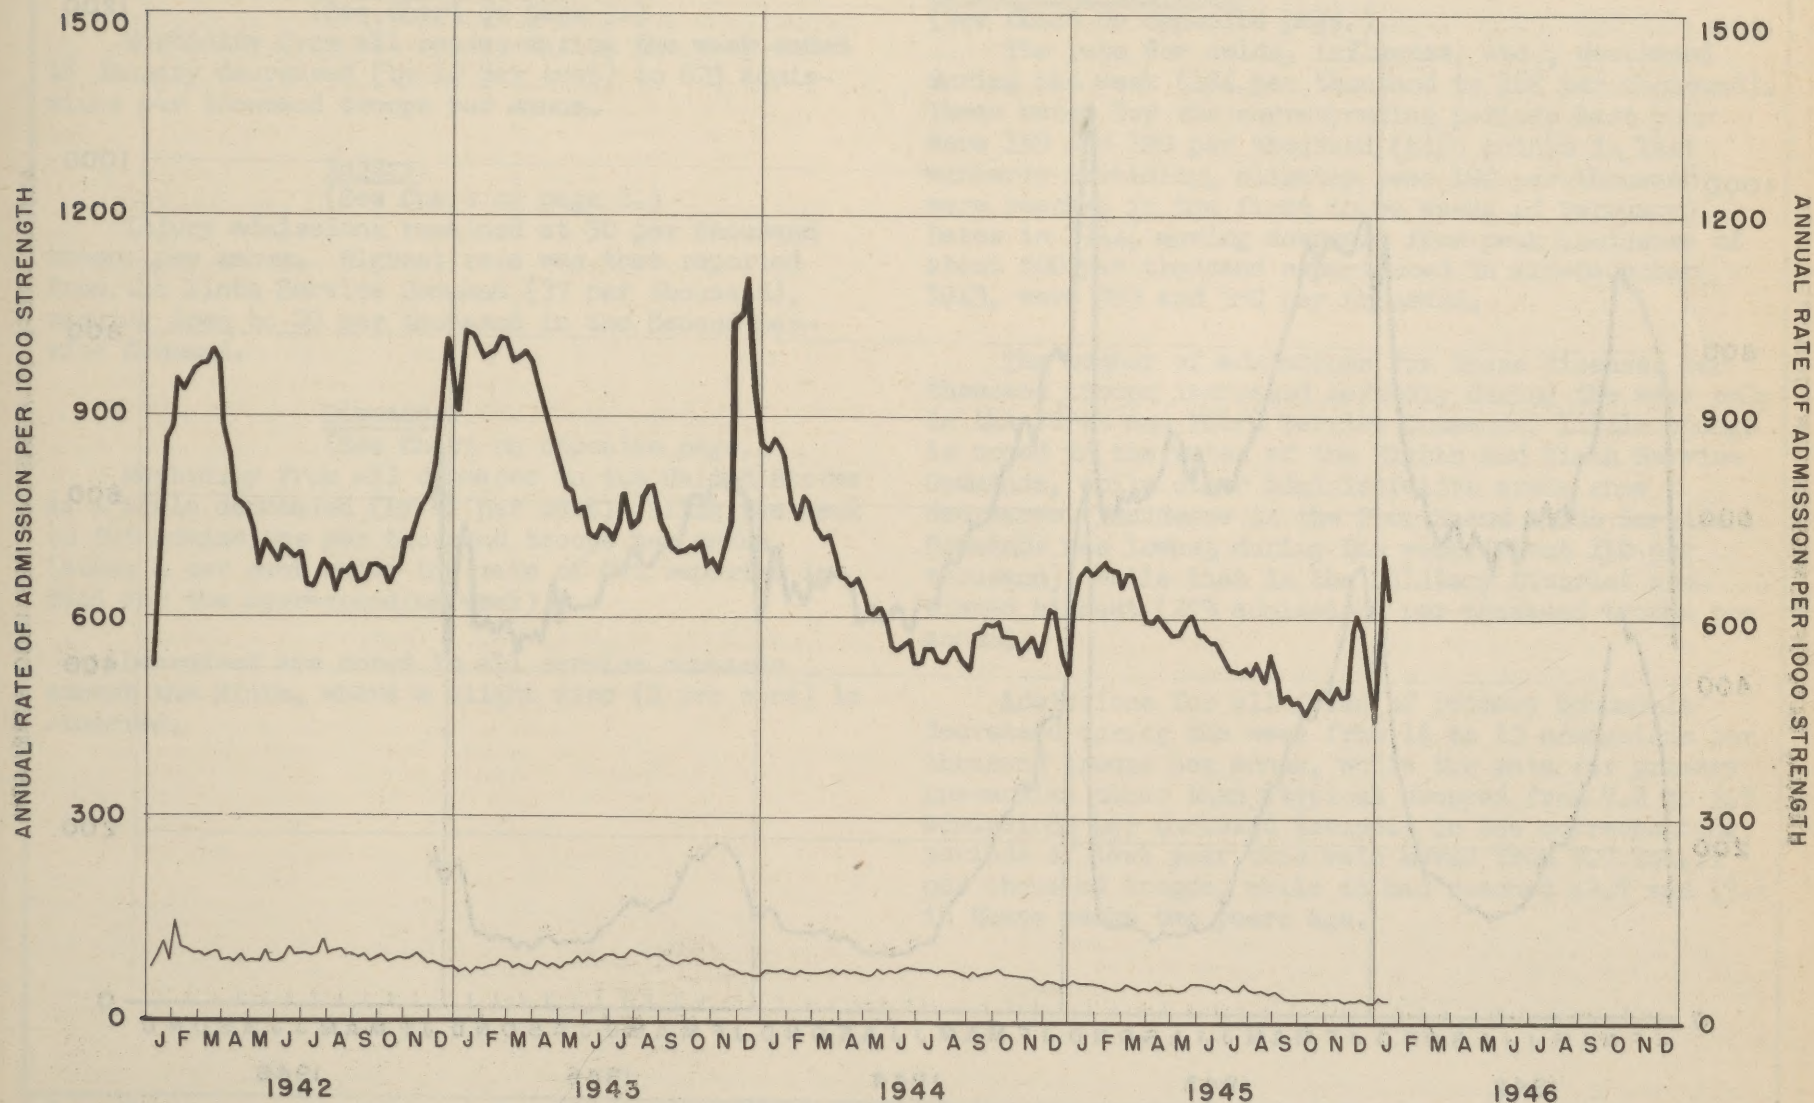

EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (L) is placed after the name of the station.

MORBIDITY FROM — ALL CAUSES — INJURY ONLY

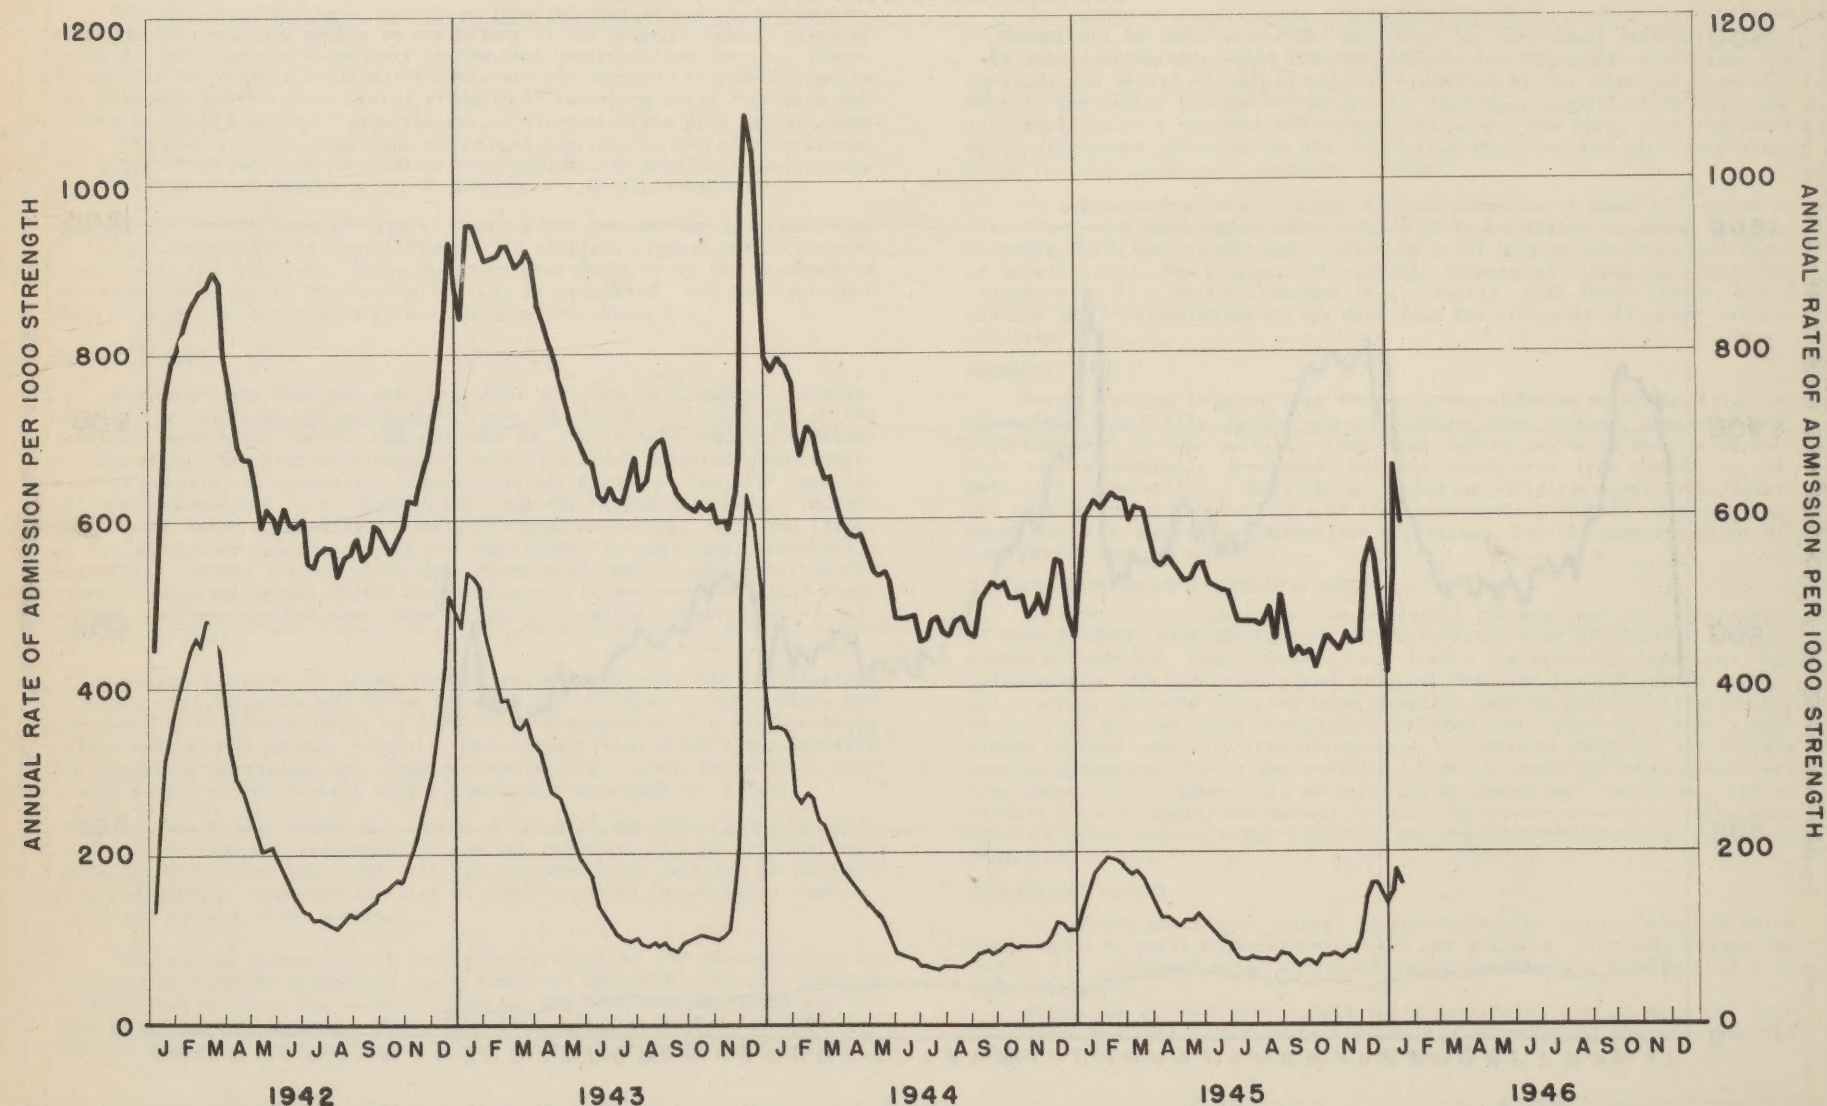

CONTINENTAL UNITED STATES

MORBIDITY FROM DISEASE COLDS INFLUENZA ETC

CONTINENTAL UNITED STATES

COMMENT ON CURRENT TRENDS

MORBIDITY FROM: All Causes:

(See Chart on page 3.)

Morbidity from all causes during the week ended 18 January decreased (by 10 per cent) to 625 admissions per thousand troops per annum.

Injury:

(See Chart on page 3.)

Injury admissions remained at 30 per thousand troops per annum. Highest rate was that reported from the Ninth Service Command (37 per thousand), ranging down to 20 per thousand in the Second Service Command.

Diseases:

(See Chart on opposite page.)

Morbidity from all diseases in the United States as a whole decreased (by 12 per cent) during the week to 595 admissions per thousand troops per annum (about 4 per cent under the rate of 622 reported in 1945 for the corresponding week).

Decreases are noted in all service commands except the Ninth, where a slight rise (2 per cent) is observed.

Respiratory Diseases:

(See Chart on opposite page.)

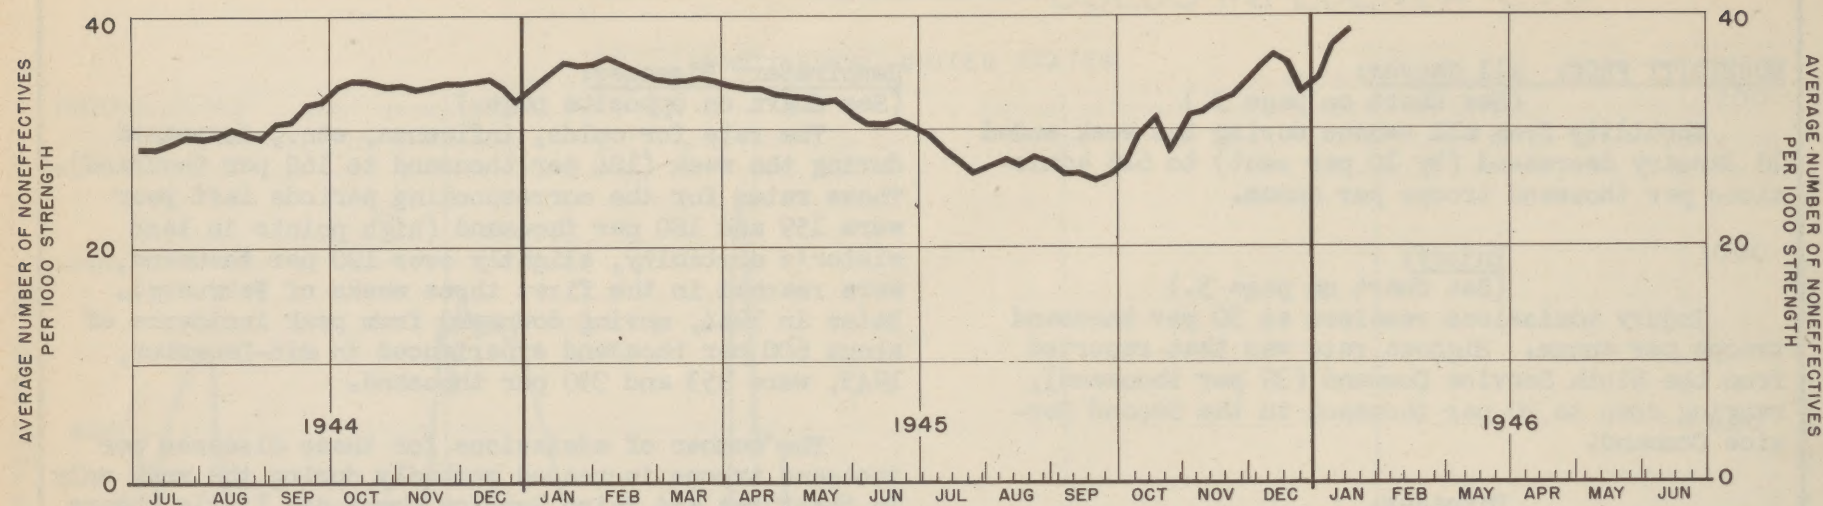

The rate for colds, influenza, etc., decreased during the week (184 per thousand to 168 per thousand). These rates for the corresponding periods last year were 159 and 180 per thousand (high points in last winter's morbidity, slightly over 190 per thousand, were reached in the first three weeks of February). Rates in 1944, moving downward from peak incidence of about 600 per thousand experienced in mid-December, 1943, were 353 and 350 per thousand.

The number of admissions for these diseases per thousand troops increased markedly during the week only in the First and Third Service Commands; little change is noted in the rates of the Eighth and Ninth Service Commands, while other administrative areas show decreases. Incidence in the Fourth and Fifth Service Commands was lowest during the week (about 110 per thousand), while that in the Military District continued highest (273 admissions per thousand troops per annum).

Admissions for all forms of primary pneumonia decreased during the week from 16 to 13 admissions per thousand troops per annum, while the rate for primary pneumonias other than atypical dropped from 7.2 to 3.7 admissions per thousand troops. In the corresponding periods of last year this rate moved from 3.7 to 4.1 per thousand troops, while it had reached 12.7 and 13.1 in these weeks two years ago.

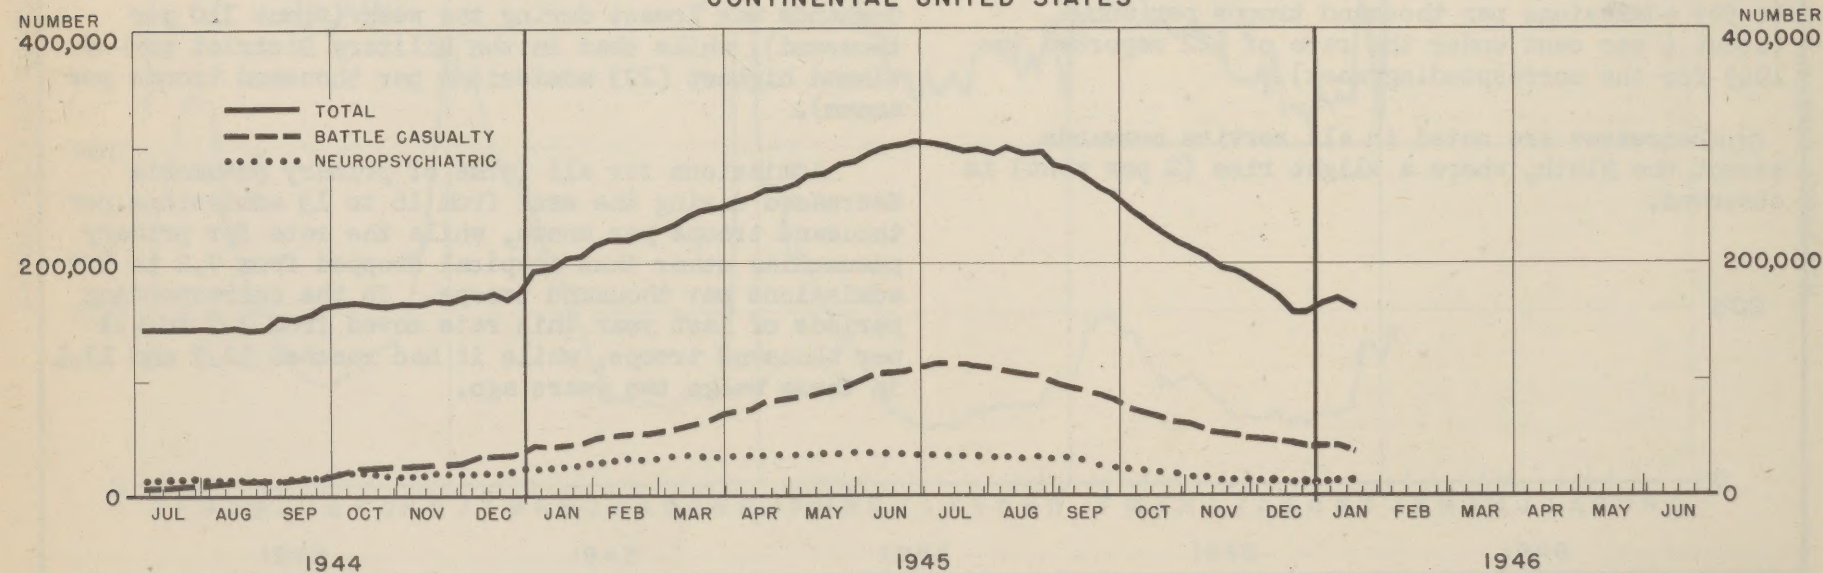

NONEFFECTIVE RATE

CONTINENTAL UNITED STATES

PATIENTS REMAINING IN HOSPITAL

CONTINENTAL UNITED STATES

COMMENT ON CURRENT TRENDS (CONT.)

Primary pneumonia admissions (for all forms) decreased in the Third, Fourth, Seventh, Eighth and Ninth Service Commands; rates ranged from 36 per thousand in the Military District of Washington to 11 in the Ninth Service Command.

Venereal Diseases:

New admissions for non-EPTS venereal diseases dropped during the week ended 18 January to 66 per thousand troops per annum from the "holiday-inflated" rate of 82 per thousand reported in the previous week. However, the current rate is as high as any reported since Pearl Harbor except that for the week ended 11 January. Morbidity from these causes decreased in all administrative areas except the First and Third Service Commands; incidence ranged from 110 admissions per thousand troops per annum in the Third Service Command down to 36 such admissions in the Military District of Washington.

Other Communicable Diseases:

Incidence of diarrhea and dysentery decreased to 3 admissions per thousand troops per annum. Highest rates (7 per thousand) were reported from the Second and Sixth Service Commands.

NONEFFECTIVE RATE:

(See Chart on page 6.)

The noneffective rate for personnel stationed in the continental United States is estimated at 38.5 per thousand troops per day for the week ended 18 January as compared with 35.9 per thousand for the corresponding week of 1945.

PATIENTS REMAINING UNDER TREATMENT: 18 JANUARY 1946:
(See Chart on page 6.)

The number of patients remaining in hospital in the Zone of Interior, including patients transferred from overseas, decreased during the week to 160,560 as compared with 165,298 at the end of the previous week.

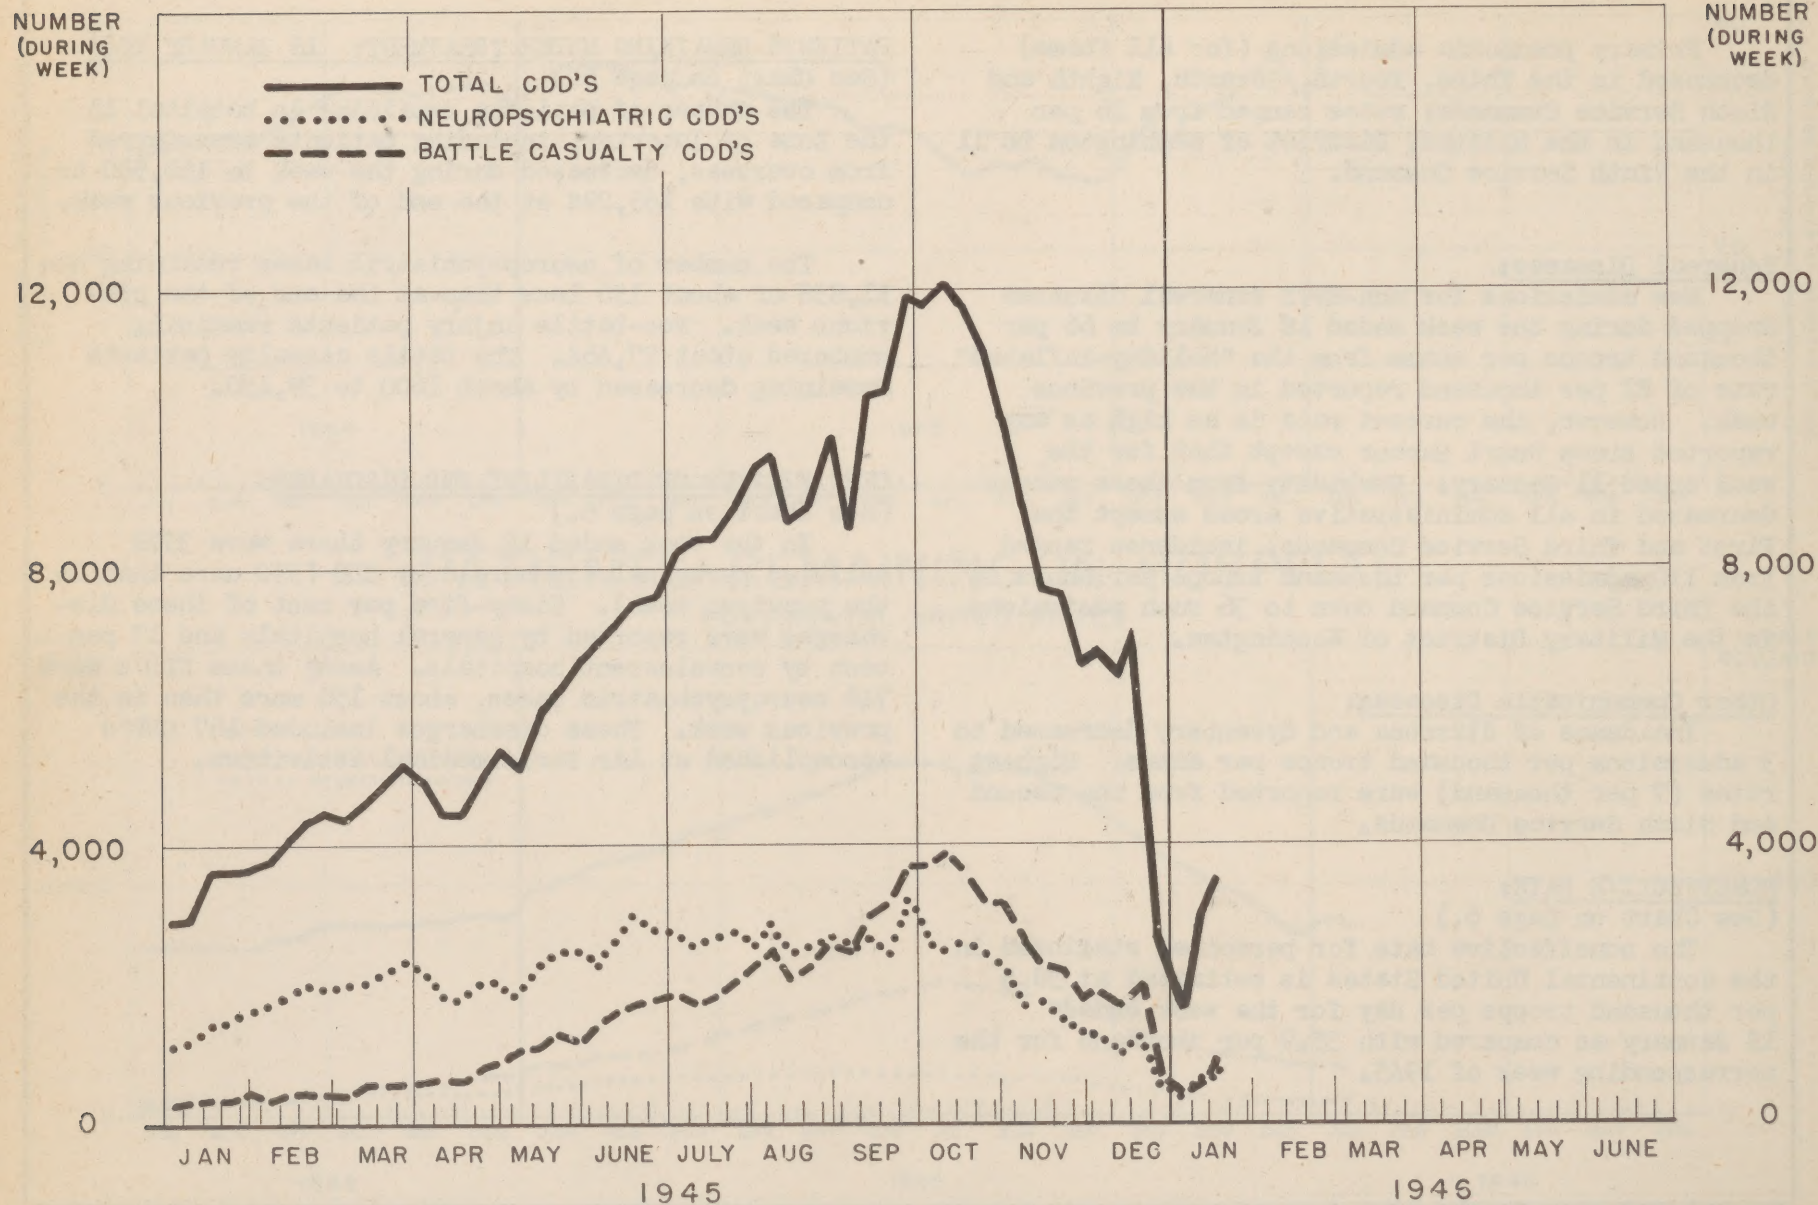

The number of neuropsychiatric cases remaining was 11,858 or about 150 less than at the end of the previous week. Non-battle injury patients remaining numbered about 27,464. The battle casualty patients remaining decreased by about 1600 to 39,430.

CERTIFICATES OF DISABILITY FOR DISCHARGE:
(See Chart on page 8.)

In the week ended 18 January there were 3578 enlisted personnel discharged by CDD (590 more than in the previous week). Sixty-five per cent of these discharges were reported by general hospitals and 17 per cent by convalescent hospitals. Among these CDD's were 746 neuropsychiatric cases, about 150 more than in the previous week. These discharges included 167 CDD's accomplished at Air Force medical activities.

COMMENT ON RECENT DEVELOPMENTS

FOR THE FOUR-WEEK PERIOD ENDED 28 DECEMBER 1945

NATURE OF THE DATA:

The data of this Monthly Report, like those of the Weekly Health Reports, have been taken from WD AGO Forms 8-122 rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. However, unlike the Weekly Health Reports which are compiled on the basis of the figures as received, so as to place the information in circulation at the earliest possible time, the figures here presented for the four-week period ended 28 December 1945 include the great majority of the corrected reports as well as reports received too late to be incorporated in the Weekly Health Report.

This report covers morbidity and mortality data for all individual stations with a strength of 1000 or over and gives details for admissions from venereal diseases and for neuropsychiatric cases.

Charts showing morbidity trends from all causes, from all diseases combined, from injury, and from colds, influenza, etc., are presented on page 21. Similar charts for specified diseases appear on pages 23, 24, and 25. A chart showing mortality trends is presented on page 28. A summary for the month of the number of admissions and corresponding morbidity rates and of the number of deaths and corresponding mortality rates for the United States as a whole and for the service commands is given on pages 29 and 30. The most pertinent morbidity data for individual stations are presented on pages 31 to 47. On pages 48 and 49 the seven stations with the highest rates of admission during the month are shown for each of the morbidity categories considered.

In reading the detailed tables, it should be borne in mind that morbidity (or mortality) rates based on small numbers of cases are not reliable. For this reason the symbol "?" has been placed after rates computed on the basis of 5 or fewer cases. Attention is invited to the definitions of admissions and admission rates and the discussion of the proportion of total Army strength included in the stations covered by this report as given on page 2. The term "month" in this report is used to denote the four or five-week period based on the number of Fridays in the calendar month.

MORBIDITY FROM ALL CAUSES, DISEASE, AND INJURY:

The admission rate for all causes for the Army in the continental United States increased to 535 during December, as compared with 504 for the previous month. The rate for diseases increased to 506 per thousand per annum, while that for injuries decreased from 30 in November to 29 in December.

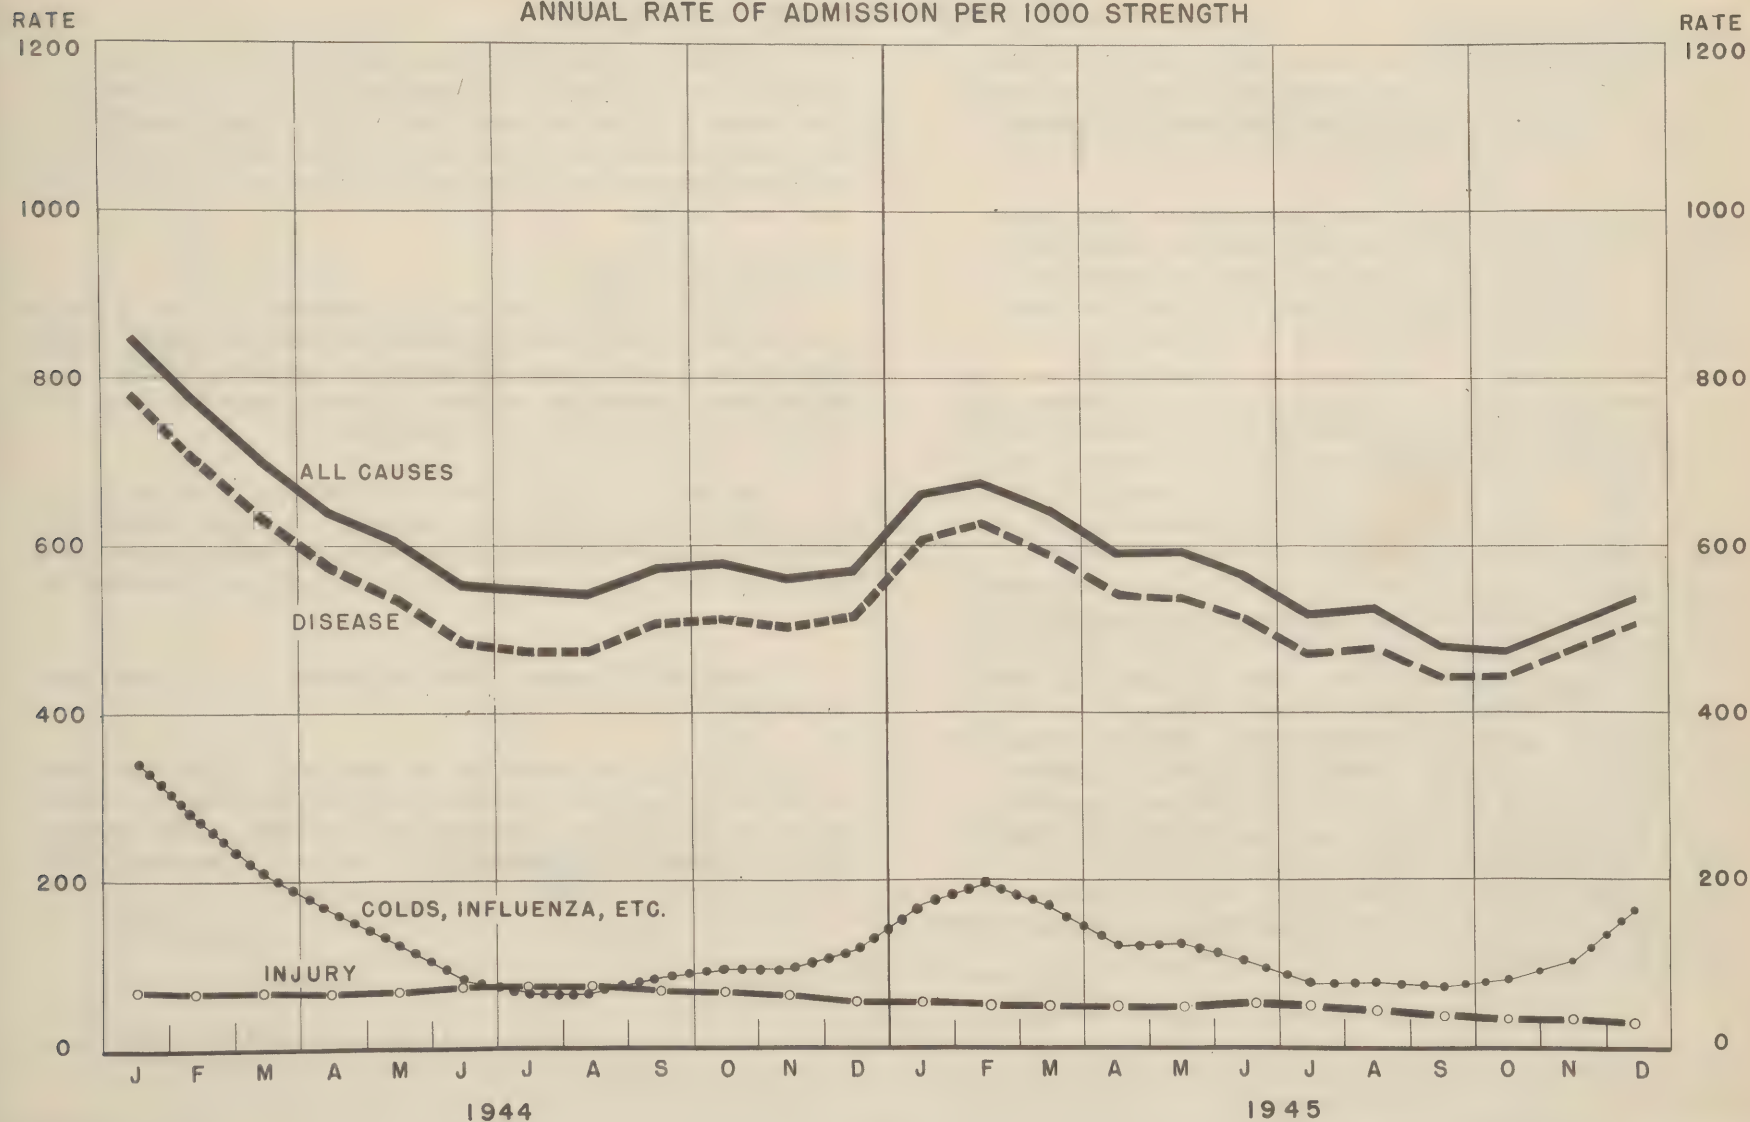

Disease admission rates increased during December in all service commands except the First and Sixth.

The admission rate for injury increased in the Third and Eighth Service Commands. Highest morbidity was reported in the Eighth and Ninth Service Commands, with rates of 33 and 35 per thousand, respectively.

COMMENT ON RECENT DEVELOPMENTS (CONT.)

RESPIRATORY DISEASES:

During December the admission rate for common respiratory diseases increased by over 50 per cent (101 per thousand to 160 per thousand). A rate of 115 per thousand was reported for December 1944.

Sharp increases in admission rates from these causes were reported from all service commands. Lowest rate (101 per thousand) was reported by the First Service Command, highest (308 per thousand) from the Military District of Washington.

Morbidity from all forms of primary pneumonia increased from 10.1 per thousand in November to 13.4 in December as compared with 10.2 in December of last year. The rate for "atypical" pneumonia moved from 7.3 in November to 9.1 per thousand in December. Increases in the rates for all forms of pneumonia took place in all service commands except the Second. Atypical pneumonia rates decreased in the Second Service Command and the Military District of Washington; however, the rate for primary pneumonias other than atypical moved from 4.1 to 7.9 per thousand in the Military District, and increased in all service commands except the Sixth. Highest admission rates for all forms of primary pneumonia were those reported from the Fourth Service Command (18.1 per thousand) and the Military District of Washington (15.4 per thousand), ranging downward to the rate of 8.3 per thousand reported from the First Service Command.

DIARRHEA AND DYSENTERY:

Morbidity from diarrhea and dysentery dropped from 4.0 per thousand in November to 3.6 in December, the rates continuing much lower than those reported in the same periods last year. Only the Military District of Washington reported a rate in excess of 5 per thousand per annum.

VENEREAL DISEASES:

Morbidity from venereal diseases, excluding cases contracted prior to entry into service, dropped during the month to 49.9 per thousand troops per annum, reflecting the large number of troops absent from posts on leaves, furloughs, and passes.

The rate for syphilis acquired while in service increased from 8.7 per thousand in November to 10.1 in December, while that for venereal diseases other than syphilis and gonorrhea moved from 1.9 per thousand to 2.5.

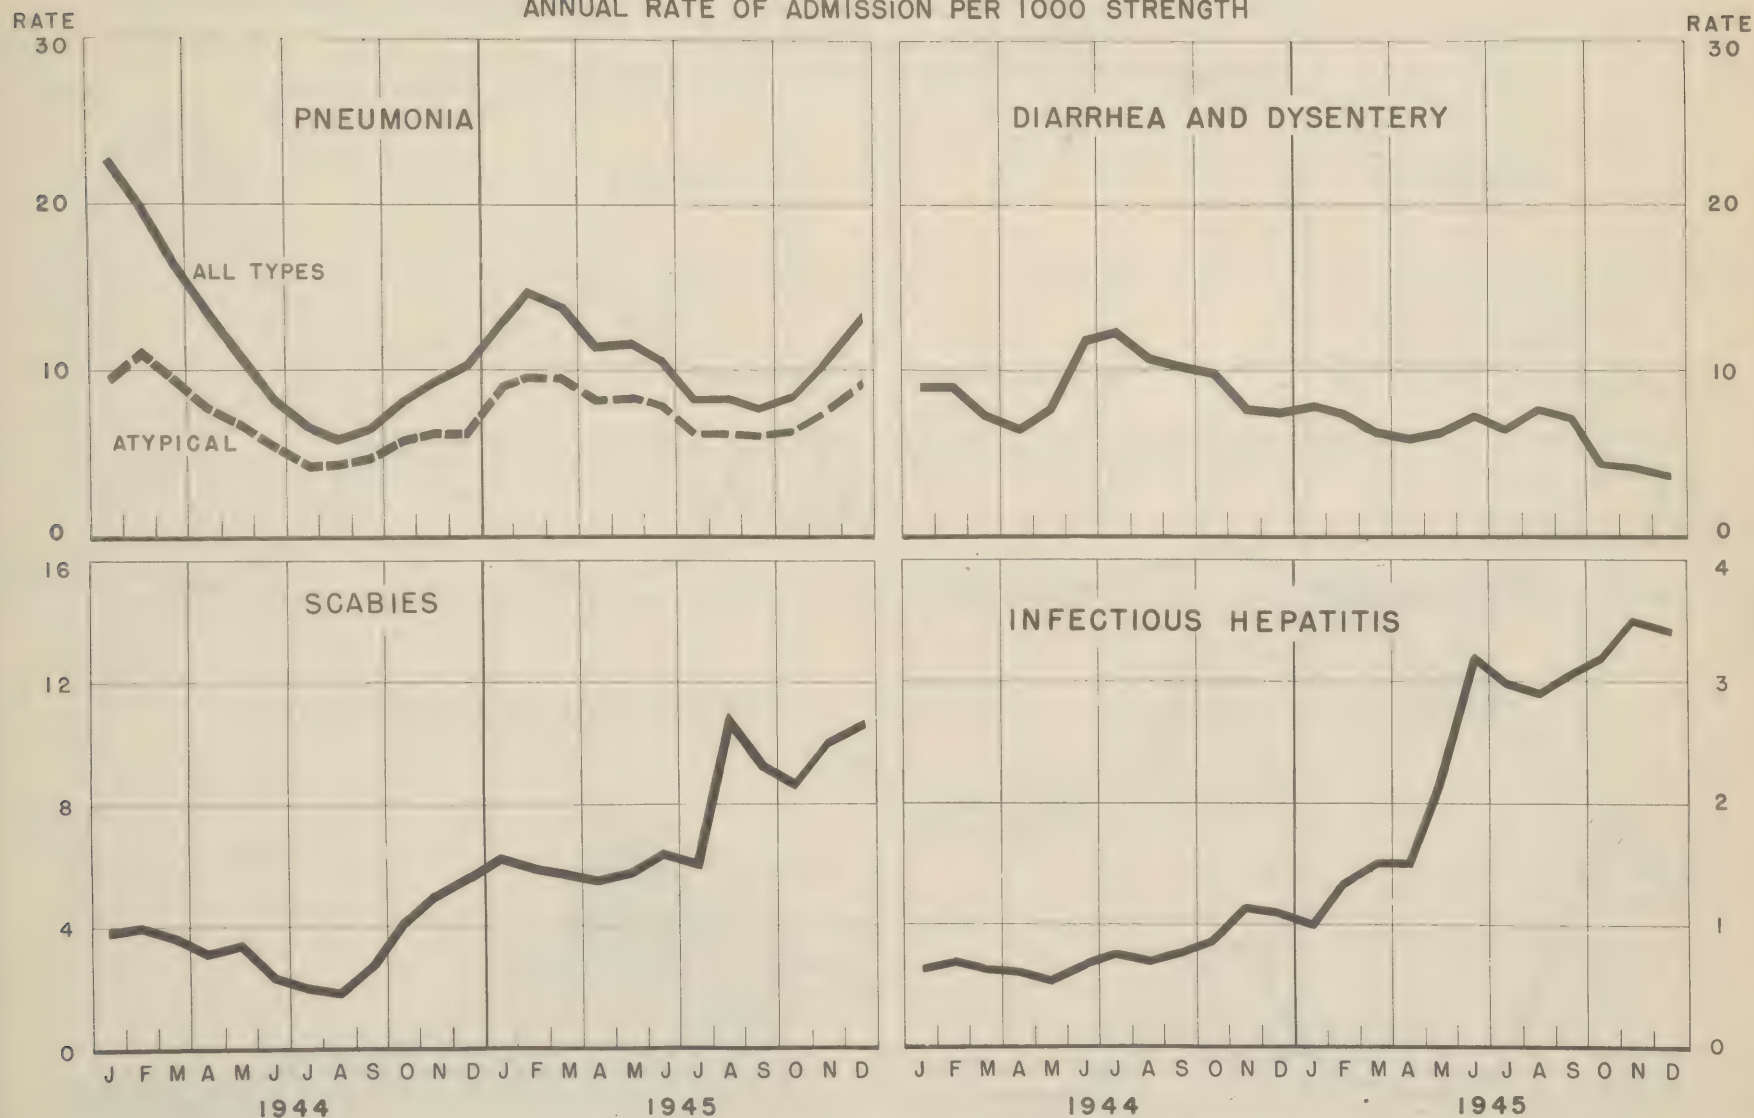

Venereal disease rates decreased in all service commands.

Morbidity represented by venereal EPTS cases was reported at 4.3 per thousand during December as compared with 3.7 per thousand in November. The average weekly number of venereal EPTS cases in December was 180, as compared with 190 in November.

COMMENT ON RECENT DEVELOPMENTS (CONT.)

SCABIES:

The admission rate for scabies increased from 10.0 in November to 11.0 per thousand in December. Indications are that recent comparatively high rates for scabies are consequences of examinations of personnel returned from overseas, prior to temporary duty or discharge.

INFECTIOUS HEPATITIS:

Morbidity from infectious hepatitis was 3.4 per thousand in December.

MEASLES:

Morbidity from measles increased to 63 cases per week during December as compared with 16 weekly cases in November. The rate moved from 0.3 to 1.5 per thousand.

MUMPS:

Morbidity from mumps increased from 1.4 per thousand to 2.0 during December.

SCARLET FEVER:

Morbidity from scarlet fever was reported at 0.8 per thousand in December, the same rate as that reported in the same month last year. Rates above 1.0 per thousand are noted in the Second and Sixth Service Commands and the Military District of Washington.

MENINGOCOCCIC MENINGITIS:

Morbidity from meningitis was reported at 0.3 per thousand in December. Current experience contrasted with a rate of 0.4 during the corresponding period of 1944.

RHEUMATIC FEVER:

Morbidity from rheumatic fever increased to 0.7 per thousand, from 0.4 in November. The Sixth Service Command reported the highest morbidity from this cause (1.6 per thousand).

TUBERCULOSIS:

Morbidity from tuberculosis was reported at 4.3 per thousand in December, a sharp increase from the rate of 3.2 per thousand in November. The current relatively high level arises in large part as the result of examinations at separation centers which tend to uncover cases which otherwise would be undetected. The rate at stations other than separation centers, however, was 2.9 per thousand in December, as compared with 2.3 in November; many stations other than separation centers, on the other hand, examined and discharged numbers of troops in December.

As of 28 December there were 2864 cases of tuberculosis remaining under treatment, representing 1.8 per cent of all patients in hospitals in this country. Of the total cases, 1156 were at Fitzsimons General Hospital and 812 at Bruns General Hospital.

MALARIA:

Morbidity from malaria acquired inside the United States remained at 0.1 per thousand in December. The number of cases presumably acquired outside the United States, which were admitted (or readmitted) for treatment in this country averaged about 343 per week.

As of 28 December there were 880 cases of malaria under treatment, representing 0.6 per cent of all patients in hospital. Of these, 5 cases were acquired in this country.

COMMENT ON RECENT DEVELOPMENTS (CONT.)

NEUROPSYCHIATRIC DISORDERS:

The annual rate of admission for neuropsychiatric disorders dropped to 20.9 in December, which is the lowest rate reported since March 1943.

During December there was an average of 1056 CDD's per week given to enlisted men classified as neuropsychiatric cases, much lower than the weekly average for November (1675 CDD's per week). The CDD's in December for men with neuropsychiatric disorders represented 19 per cent of all CDD's as compared with 20 per cent in November.

The number of neuropsychiatric cases remaining under treatment as of 28 December was 11,384 or about 3500 less than at the end of November. During December, the number of locked ward cases decreased by about 200 to 2885 while open ward cases decreased by about 20 per cent. Neuropsychiatric cases remaining represented 7.1 per cent of all patients in hospital.

MORTALITY:

Mortality from all causes during December was reported at 1.82 per annum per thousand strength. The mortality rate from disease was 0.91 per thousand in December while the reported mortality rate from injury decreased from 0.84 per thousand to 0.30 per thousand.

It should be noted that the reporting of deaths on Forms WD AGO 8-122 is not complete, particularly for deaths from injury, for which the understatement may be as great as 10 per cent (see Special Report on Deaths in 1944 in Weekly Health Report, Volume V, Report No. 27). The mortality rate from injury when adjusted to allow for this under-reporting is about 0.88 per thousand, resulting in an estimated total death rate from all causes of 1.90 per thousand.

NONEFFECTIVE RATE:

The noneffective rate for Army personnel stationed in this country was about 35.0 per thousand in December as compared with 30.7 per thousand reported for November.
